

LAXSON BANDSAW MACHINES

In the year 1931, we laid the foundation of manufacturing revolutionary machine tools & engineering products at Surendranagar (Gujarat, India). With the experience and expertise of Late Sri Laxman Kadva Mistry we began manufacturing Bandsaw Machines in the year 1960 to suit the demands of Engineering Industries of India. Then M/s. Batliboi & Co. was our sole selling agent during the period of 1960 to 2000.

Our pioneering brand 'LAXSON' is well accepted for high-end quality machines, earning us a reputation in the entire engineering industry. Our talented technocrats keep an update on the modern technology, inculcating it in the machines too. We have even installed SAP Germanay Software for our office operations. This makes us eligible to meet the global needs of bandsaw machines.

We are credited for 25 different Machine models for Metal Cutting Bandsaw machines of various cutting capacities. The Company produces Manual and Automatic, Semi Automatic operated Bandsaw machines with cutting capacity ranging from 175 mm to 2500 mm. With valuable support of the customers, we have produced more than 11000 machines.
